

Expanding an existing Evenli-operated site with a new charging device

Any charging device model supported by Evenli's operator service can technically be installed at an Evenli-operated site. You may expand the site with an existing device model or choose a different model from another supported manufacturer.

Evenli supports approximately 50 manufacturers and over 200 charging device models operating under the OCPP 1.6 or OCPP 2.0.1 protocol. To request the latest list of compatible charging devices, contact: myynti@evenli.com. You may also contact Evenli Sales to confirm model compatibility.

Examples of Supported Manufacturers

Customers may purchase a new charging device and its installation from any authorized electrical contractor. Evenli's sales team can recommend suitable device models and contractors based on your site and usage needs.

Activating the operator service for a new charging device

- Once the charging device has been installed, notify Evenli's customer delivery team (toimitus@evenli.com), who will activate the operator service for the new device.
- If the charging point is a so-called shareholder spot (e.g., in a housing company) and the user is responsible for the costs, the user agreement must be completed at www.evenli.com/kayttosopimus.
- A new charging device requires a **data connection** to function. If needed, you can order a SIM card as an additional service from Evenli. We recommend acquiring the SIM card before installation so the technician can complete everything in a single visit, avoiding unnecessary service calls. The SIM card is ordered during the user agreement process.

Checklist for Adding a New Charging Device

- The selected charging device model is on the list of compatible devices
- The installer has configured the device according to Evenli's installation instructions
- The installer submits the required installation data to Evenli according to the installer instructions

You can find Evenli's Installer Guide at: www.evenli.com/materiaalipankki under the name:

"Ohje asentajalle Evenlin operointipalvelun käyttöönottoon".

Compatibility with Parking Energy quick connectors

- The Parking Energy EV Charging Unit 2×3.7kW and Parking Energy T2Max 2×22kW can be installed directly into Parking Energy's dual-port quick connectors.
- Parking Energy also offers a single-port 22kW model, the T2Solo. To install a T2Solo with a Parking Energy quick connector, a Parking Energy adapter must be placed between the connector and the device. The adapter supports 1–2 T2Solo devices and can also include a standard heating socket if an existing heating socket is replaced by the adapter.
- The customer orders the Parking Energy device and its installation directly from an authorized Parking Energy reseller. A list of resellers can be found at: www.parkingenergy.com > Jälleenmyyjät
